Senior Java & Distributed Systems Engineer and Technical Leader with **10 years** of experience architecting low-latency, high-throughput backend systems. Expert in the **Java ecosystem (Spring Boot, Hibernate, Concurrency models)**, distributed messaging, custom framework development, and mission-critical high-load financial infrastructure. Author of [Unison](#), [nodes.js](#), and [EHTML](#).

Skills

- **Java & Core Backend Ecosystem:** Java (SE/EE, 8-21), Spring Framework (Spring Boot, Spring Cloud, Spring Security, Data), Hibernate/JPA, JDBC, Multithreading & Concurrency, Node.js, Python (FastAPI), RESTful APIs, gRPC.
 - **Distributed Systems & Architecture:** Microservices Architecture, Event-Driven Architecture (EDA), Multi-tenant SaaS, High-Load Architecture, Database Isolation & Locking Strategies, Scalability, High Availability.
 - **Data Engineering & Storage:** PostgreSQL, MySQL, Redis (Caching, Pub/Sub), Apache Kafka, RabbitMQ, ClickHouse (OLAP), Snowflake, DynamoDB, Elasticsearch, Query & Index Optimization.
 - **Cloud Platforms & DevOps (IaC):** AWS (EC2, ECS, S3, RDS, Lambda, CloudWatch, SQS), GCP, Docker, Kubernetes (K8s), Terraform, GitHub Actions, GitLab CI/CD, Artifactory.
 - **Observability & Telemetry:** OpenTelemetry, Prometheus, Grafana, New Relic, Graylog, Datadog, Distributed Tracing, Log Aggregation.
 - **UI/UX & Web Technologies:** Web Components, EHTML (Founder), React, Next.js, WebRTC, WebSockets, Tailwind CSS.
-

Work Experience

InstruxMusic (Remote, USA) — Senior Full-Stack / Backend Architect. Nov 2024 – Present

- Architected and accelerated the launch of a high-load ed-tech ecosystem, delivering a production-ready MVP in under 3 months, focusing on high-performance backend micro-services and strict data consistency models.
- Engineered a scalable multi-tenant scheduling engine and automated invoicing system, implementing thread-safe concurrent transactional workflows and seamless Stripe API integration.

- Developed a proprietary, low-latency video conferencing solution from scratch using vanilla Web Components and Xirsys (STUN/TURN), bypassing heavy third-party framework dependencies to achieve highly efficient real-time streaming.
- Optimized database tier architectures using PostgreSQL, ensuring high availability and designing optimized query layers to support real-time data ingestion under heavy user traffic.

[View Recommendations](#)

Congrify (Remote, Germany/Italy) — Senior Backend / Systems Engineer. *Oct 2023 – Oct 2024*

- Directed technical strategy and telemetry architectures by designing an advanced tracking and observability ecosystem using Grafana and AWS CloudWatch to monitor critical transaction anomalies in multi-tenant systems.
- Re-engineered and optimized high-throughput **Java**, Node.js, and Python runtimes deployed across serverless AWS Lambda environments, achieving a 20% reduction in cloud operational costs through precise memory tuning and runtime optimizations.
- Spearheaded the modernization of legacy enterprise services, dramatically improving thread concurrency patterns, database isolation levels, and high-load query performance across distributed data clusters.
- Enhanced asynchronous messaging pipelines by leveraging Apache Kafka and AWS SQS architectures, guaranteeing zero-loss transaction processing and robust fault tolerance during heavy data-ingestion spikes.

FxPro (On-site, Limassol, Cyprus) — Senior Software Engineer (Java & Node.js). *Nov 2022 – Oct 2023*

- Orchestrated, maintained, and scaled core infrastructure for 60+ distributed microservices utilizing **Java (Spring Boot)** and Node.js (NestJS), delivering a 20% improvement in stability and a 15% reduction in production downtime.
- Built a centralized, secure Authentication Service with Azure Active Directory integration (OAuth2/OIDC) and successfully migrated core payment configurations for 20+ global systems across 50+ countries.
- Optimized high-throughput financial data flows by leveraging Redis cluster-caching alongside resilient transactional models in PostgreSQL.
- Managed containerized deployments via GitLab CI/CD pipelines and Artifactory, streamlining delivery life cycles by 25% while ensuring highly available blue-green rollouts.

[View Recommendations](#)

Cognitran (On-site, Krakow, Poland) — Senior Java Software Engineer. *Mar 2021 – Oct 2022*

- Developed mission-critical, enterprise **Java applications** focused on offline-first automotive diagnostics and multi-threaded data translation pipelines for Tier-1 clients including Ford and Jaguar Land Rover.

Huawei (On-site, Moscow, Russia) — Senior Software Engineer. *Jan 2020 – Mar 2021*

- Designed high-performance cloud infrastructure components, engineered custom data parsers, and optimized internal developer tooling using robust backend runtimes.

Grid Dynamics — Intern to Senior Software Engineer (Java / Cloud Tech). *Dec 2015 – Jan 2019*

- Progressed from Intern to Senior Engineer, architecting and delivering high-impact **Java-based cloud-native** R&D software and microservices for global enterprises including Google, Raymond James, and Home Depot.

Certifications:

[Oracle Certified Associate, Java SE 8 Programmer](#)

Open Source Projects:

[EHTML](#), [Nodes.js](#), [Mathematics of Neural Network](#)

Education

Applied Mathematics and Computer Science: *Saratov State University, 2012 - 2016*

[Bachelor's Thesis: Cost Minimization of Energy on the Control of Satellite's Angular Motion](#)
