[GitHub](#) / [StackOverflow](#) / [LinkedIn](#) / [Instagram](#)

**Senior AI Systems Engineer** and **Agent Builder** with **10 years** shipping production software and **5+ years** applying ML/AI concepts in real products. I design and deploy LLM-powered agents, automation pipelines, and intelligent middleware — not slide decks. Background in Applied Mathematics; author of [Mathematics of Neural Networks](#), [Unison](#) (natural-language → structured output), [nodes.js](#), and [EHTML](#). Daily builder with Claude Code, Cursor, Codex, and Copilot — I use AI to ship faster, then harden what ships in production.

---

## Skills

- **AI Agents & LLM Engineering:** Agent orchestration, LLM middleware, prompt/tool-chain design, RAG-style data tiers, streaming inference pipelines, AI workflow automation (n8n), chat-based support systems, evaluation & guardrails for production AI features.
  - **AI-Native Development:** Cursor IDE, Claude Code, GitHub Copilot, Codex, Gemini — AI-accelerated full-stack delivery, code review, refactoring, and test generation at scale.
  - **Backend for AI Systems:** Node.js (Express, Fastify, NestJS), Python (FastAPI), Java (Spring Boot), TypeScript, REST/GraphQL APIs, event-driven architectures, low-latency data access layers for real-time AI workloads.
  - **Data & Vector-Ready Infrastructure:** PostgreSQL, Redis, DynamoDB, S3, ClickHouse, Snowflake, Kafka, RabbitMQ, Elasticsearch — optimized ingestion, caching, and retrieval paths for analytical and AI-assisted products.
  - **Cloud & MLOps-Adjacent Ops:** AWS (Lambda, ECS, S3, RDS, CloudWatch, SQS), GCP, Docker, Kubernetes, Terraform, GitHub Actions, OpenTelemetry, Grafana, Datadog — observability and cost control for AI-heavy workloads.
  - **Product Surfaces for AI:** React, Next.js, Web Components, EHTML, WebSockets, WebRTC — interfaces where users interact with agents, automations, and intelligent dashboards.
- 

## Work Experience

**InstruxMusic (Remote, USA) — Senior Full-Stack Developer, Tech Lead.** Nov 2024 — *Present*

- Built an AI-assisted product development workflow using Cursor, Claude Code, and custom tooling — cutting feature delivery time while keeping architecture lean (Node.js, PostgreSQL, Docker).

- Shipped a production ed-tech platform in under 3 months: scheduling engine, Stripe billing, video conferencing, and notification automations — treating the stack as an agent-ready foundation for future intelligent features.
- Designed transactional and communication pipelines (Postmark, Stripe) that agents and automations can trigger reliably — reducing manual ops and setting up clean hooks for LLM-driven workflows.
- Own technical strategy alongside product and pricing decisions, prioritizing systems that scale with automation rather than headcount.

[View Recommendations](#)

**Congrify (Remote, Germany/Italy) — Full Stack Senior Software Engineer, Tech Lead.** *Oct 2023 – Oct 2024*

- Engineered a production **AI middleware layer** on top of DynamoDB and S3, enabling real-time streaming data processing and intelligent analytical insights for payment intelligence users.
- Built observability around AI and data pipelines (Grafana, CloudWatch) to detect transaction anomalies — the same patterns used to monitor agent reliability and drift in production.
- Optimized multi-runtime serverless workloads (Java, Python, Node.js) on AWS Lambda, cutting cloud costs 20% while increasing throughput for data-heavy AI features.
- Modernized legacy microservices and migrated analytical datasets to ClickHouse and Snowflake, creating a high-performance retrieval layer for downstream intelligence products.
- Led frontend redesign with React, improving how users consumed AI-generated insights through better caching, state management, and UX.

**FxPro (On-site, Limassol, Cyprus) — Senior Software Engineer.** *Nov 2022 – Oct 2023*

- Maintained 60+ microservices (Java, Node.js) with the reliability and observability standards required before layering intelligent automation on financial infrastructure.
- Built centralized auth (Azure AD) and migrated payment configs across 50+ countries — identity and compliance foundations that agent systems depend on.
- Implemented full-stack telemetry (New Relic, Graylog, Grafana) across 25+ services for rapid incident response and data-driven optimization.

[View Recommendations](#)

**Cognitran (On-site, Krakow, Poland) — Senior Software Engineer.** *Mar 2021 – Oct 2022*

- Delivered offline-first diagnostic software and automated documentation pipelines for Ford and Jaguar — early-career work in rule-based automation and structured data extraction at enterprise scale.

**Huawei (On-site, Moscow, Russia) — Senior Software Engineer.** *Jan 2020 – Mar 2021*

- Built high-throughput data parsers and developer tooling — foundational experience in turning messy inputs into clean, machine-processable structures.

**Grid Dynamics — Intern to Senior Software Engineer.** *Dec 2015 – Jan 2019*

- Progressed from Intern to Senior Engineer on cloud-native R&D tooling for Google, Raymond James, and Home Depot — large-scale data systems before the LLM era.
