[GitHub](#) / [StackOverflow](#) / [LinkedIn](#) / [Instagram](#)

MVP Builder and **Senior Full-Stack Engineer** who ships production-ready products in weeks, not quarters. **10 years** of experience; repeated pattern: zero-to-one platforms with scheduling, payments, real-time comms, and multi-tenant SaaS — built solo or with tiny teams. Creator of custom frameworks ([nodes.js](#), [EHTML](#)) specifically to cut MVP cycle time. Founder of [Unison](#); tech leader at [InstruxMusic](#).

MVP Toolkit

- **Rapid Product Delivery:** 0→1 in <3 months (InstruxMusic), solo full-stack ownership, scope ruthlessly, ship iteratively, production on day one — not prototype theater.
 - **Custom Frameworks for Speed:** nodes.js (backend), EHTML (declarative frontend), Web Components — own tooling that removes boilerplate and framework bloat.
 - **MVP Stack:** Node.js (Express, Fastify, NestJS), TypeScript, PostgreSQL, Redis, Docker, DigitalOcean/AWS, Stripe, Postmark, WebRTC, React/Next.js when needed.
 - **Core MVP Features:** Multi-tenant scheduling, payment & invoicing, auth (OAuth2/OIDC), real-time video/chat, notification pipelines, admin dashboards, API design.
 - **Scale-Ready Foundations:** Event-driven architecture, caching layers, observability hooks, CI/CD from the start — MVPs that don't need a rewrite at 10x traffic.
 - **Business-Aware Engineering:** Pricing models, feature prioritization, build-vs-buy, cost-conscious infra choices — engineering tied to revenue, not vanity metrics.
 - **AI-Accelerated Build:** Cursor, Claude Code, Copilot — use AI to compress delivery timelines without shipping garbage.
-

Work Experience

InstruxMusic (Remote, USA) — Solo MVP Builder → Tech Lead. Nov 2024 – Present

- **Shipped production MVP in under 3 months** as primary builder: multi-tenant scheduling, Stripe billing, automated invoicing, video lesson rooms, chat, and brand builder — Node.js, PostgreSQL, Docker, DigitalOcean.
- Built proprietary low-latency video conferencing from scratch (Web Components + Xirsys STUN/TURN) instead of paying for heavy SDKs — saved months of integration and kept the stack lean.
- Used custom backend (nodes.js patterns) and frontend (EHTML/Web Components) to move faster than a standard React+Nest boilerplate team.

- Wired Postmark notification pipelines on day one so the product felt complete to early users — not a hacky beta.
- Involved in pricing, packaging, and roadmap — MVP decisions driven by what sells, not what's technically interesting.

[View Recommendations](#)

Unison — Founder & MVP Architect. *Dec 2019 – Present*

- Built a music-tech platform from zero: natural-language input → sheet music output. Stack: Node.js, MongoDB, SVG, EHTML. Long-running side project proving ability to sustain and evolve an MVP into a maintainable product over years.

Congrify (Remote, Germany/Italy) — Senior Software Engineer, Tech Lead. *Oct 2023 – Oct 2024*

- Delivered high-impact features on tight timelines: anomaly monitoring dashboard, data processing pipelines, frontend redesign — shipped incrementally while keeping production stable.
- Cut AWS Lambda costs 20% — MVP-minded optimization: only pay for what users actually consume.
- Migrated analytical workloads to ClickHouse/Snowflake to unblock product features that depended on fast queries.

FxPro (On-site, Limassol, Cyprus) — Senior Software Engineer. *Nov 2022 – Oct 2023*

- Delivered centralized Auth Service (Azure AD) and payment config migration across 50+ countries — large-scope projects executed with MVP-style milestone delivery.
- Reduced deployment cycles 25% via CI/CD improvements — faster iteration loops for 60+ microservices.

[View Recommendations](#)

Cognitran (On-site, Krakow, Poland) — Senior Software Engineer. *Mar 2021 – Oct 2022*

- Shipped offline-first diagnostic features for Ford/Jaguar — incremental delivery of high-value capabilities under enterprise constraints.

Huawei (On-site, Moscow, Russia) — Senior Software Engineer. *Jan 2020 – Mar 2021*

- Built automation tools that accelerated API migration across 50+ projects — internal MVP tooling that multiplied team output.

Grid Dynamics — Intern to Senior Software Engineer. *Dec 2015 – Jan 2019*

- Delivered R&D internal tools and microservices for Google, Raymond James, and Home Depot — fast-turnaround client projects from day one of career.
-

Frameworks Built for Speed:

[Nodes.js](#) — procedural Node.js backend framework with Cluster API (HTTP/2), [EHTML](#) — declarative frontend that cuts client-side JS boilerplate

Certifications:

[Oracle Certified Associate Java SE 8 Programmer](#)

Education

Applied Mathematics and Computer Science: *Saratov State University, 2012 - 2016*

[Bachelor's Thesis: Cost Minimization of Energy on the Control of Satellite's Angular Motion \(in Russian\)](#)
