[GitHub](#) / [StackOverflow](#) / [LinkedIn](#) / [Instagram](#)

Senior Full-Stack Software Engineer with **10 years** across backend, frontend, cloud, and data — plus a strong **PHP** background in enterprise outsourcing, fintech, and SaaS. Comfortable owning legacy PHP codebases, modernizing them incrementally, and building greenfield features in Node.js, Java, and React/Next.js. Deep PHP ecosystem knowledge (Laravel, Symfony, Composer, Doctrine). Author of [nodes.js](#) and [EHTML](#).

Skills

- **PHP Ecosystem:** PHP 7.x/8.x, OOP, Composer, PSR standards (PSR-4, PSR-7, PSR-11), Laravel, Symfony, PHPUnit, PHPStan, Doctrine ORM, Eloquent, Blade/Twig, REST API design in PHP.
 - **PHP in Production:** Legacy modernization, monolith decomposition, performance profiling (OPcache, query optimization), session & cache strategies (Redis, Memcached), queue workers (Redis, RabbitMQ), secure auth (OAuth2, JWT, SAML).
 - **Full-Stack Around PHP:** MariaDB/MySQL, PostgreSQL, Redis, Elasticsearch, Nginx/Apache, Docker, CI/CD (GitHub Actions, GitLab CI), AWS/GCP deployment.
 - **Polyglot Integration:** Node.js, Java (Spring Boot), Python (FastAPI), TypeScript — experienced integrating PHP services into microservice estates and event-driven architectures.
 - **Frontend (when needed):** React, Next.js, Web Components, EHTML, Tailwind CSS, API consumption patterns from PHP backends.
 - **Architecture:** Microservices, EDA, multi-tenant SaaS, payment integrations (Stripe), message queues (Kafka, RabbitMQ, AWS SQS), observability (Grafana, New Relic, OpenTelemetry).
 - **Full-Stack Beyond PHP:** Node.js (NestJS, Express), Java (Spring Boot), Python (FastAPI), TypeScript · React, Next.js, Web Components, EHTML, Tailwind, Angular · PostgreSQL, MySQL, Redis, ClickHouse, Snowflake, MongoDB, Elasticsearch · AWS, GCP, Azure, Docker, K8s, Terraform, GitHub Actions, GitLab CI · WebRTC, WebSockets, Azure AD, Postmark · AI tools (Cursor, Copilot, n8n).
-

Work Experience

InstruxMusic (Remote, USA) — Senior Full-Stack Developer, Tech Lead. Nov 2024 — Present

- Architected and shipped a production ed-tech platform in under 3 months; evaluated PHP/Laravel vs. Node.js for speed-to-market and chose a stack optimized for solo delivery and long-term maintainability.
- Built payment and invoicing integrations (Stripe) using patterns directly transferable from prior PHP billing systems — idempotent webhooks, retry logic, and audit trails.

- Designed multi-tenant scheduling and notification pipelines with the same data-modeling discipline used in PHP SaaS products (tenant isolation, soft deletes, audit columns).

[View Recommendations](#)

Congrify (Remote, Germany/Italy) — Full Stack Senior Software Engineer, Tech Lead. *Oct 2023 – Oct 2024*

- Worked across a polyglot backend (Java, Python, Node.js, **legacy PHP services**) — maintained and extended PHP components handling payment data ingestion while modernizing surrounding microservices.
- Improved concurrency and query performance in legacy services — same class of problems as optimizing Doctrine/Eloquent N+1 queries and PHP-FPM worker tuning.
- Built monitoring (Grafana, CloudWatch) and async pipelines (SQS, Pub/Sub) that PHP queue workers and cron-based jobs plugged into reliably.
- Led React frontend redesign; defined API contracts consumed by both PHP and Node.js backends.

FxPro (On-site, Limassol, Cyprus) — Senior Software Engineer. *Nov 2022 – Oct 2023*

- Maintained and integrated services across 60+ microservices including **PHP-based payment and configuration modules** alongside Java (Spring Boot) and Node.js (NestJS) services.
- Migrated payment configurations for 20+ global systems — hands-on with PHP config scripts, env management, and cross-service deployment coordination.
- Optimized Redis caching and PostgreSQL queries shared across PHP and JVM runtimes.
- Documented 40+ services including PHP APIs, onboarding guides, and runbooks for the broader engineering team.

[View Recommendations](#)

Cognitran (On-site, Krakow, Poland) — Senior Software Engineer. *Mar 2021 – Oct 2022*

- Delivered enterprise diagnostic tooling; worked with mixed PHP/Java backend components for Ford and Jaguar client integrations and automated documentation pipelines.

Huawei (On-site, Moscow, Russia) — Senior Software Engineer. *Jan 2020 – Mar 2021*

- Built automation tooling for large Java codebases; contributed to internal DevOps libraries — experience directly applicable to PHP CI/CD pipeline design and Composer package management at scale.

Grid Dynamics — Intern to Senior Software Engineer. *Dec 2015 – Jan 2019*

- Early career **PHP development** on enterprise client projects (Home Depot support tooling, Raymond James microservices) — built REST APIs, database layers, and integration modules in PHP alongside Java services. Progressed from Intern to Senior in four years.

PHP-Relevant Open Source:

Active on [StackOverflow](#) (PHP, Java, Node.js); author of [Nodes.js](#) and [EHTML](#) — framework design experience that maps cleanly to Laravel/Symfony architecture decisions.

Certifications:

[Oracle Certified Associate Java SE 8 Programmer](#)

Education

Applied Mathematics and Computer Science: *Saratov State University, 2012 - 2016*

[Bachelor's Thesis: Cost Minimization of Energy on the Control of Satellite's Angular Motion \(in Russian\)](#)
