[GitHub](#) / [StackOverflow](#) / [LinkedIn](#) / [Instagram](#)

Senior QA Engineer (Test Automation) and **Full-Stack Engineer** with **4+ years** in software testing and **3+ years** building **Python** automation in production. Split roughly **50/50 manual and automated** work — explore new payment and B2B flows by hand, then lock them into regression suites. Deep **FinTech / payments** domain: Stripe, global payment configs, transaction pipelines, and complex billing logic. Comfortable with developers, business analysts, and release stakeholders across remote release cycles. Also author of [nodes.js](#) and [EHTML](#).

Skills

- **Test Automation (Python):** pytest, unittest, requests, API test suites, page-object patterns, fixtures, parametrized tests, flaky-test stabilization, test data management, extending existing Python automation frameworks, coverage growth & tech-debt cleanup.
 - **Manual & Exploratory QA:** Test strategy & test plans, complex business-logic validation, B2B and payment-scenario testing, regression & smoke cycles, defect reporting & triage, acceptance criteria review with analysts.
 - **API & Integration Testing:** Postman (collections, environments, Newman), REST/GraphQL, Stripe webhooks, OAuth2 flows, contract-style checks between microservices.
 - **Performance & Load Testing:** Load and stress testing of payment and async pipelines; bottleneck analysis under transactional surges; baseline metrics before releases.
 - **CI/CD & Reporting:** GitLab CI/CD, GitHub Actions, Dockerized test runs, **Allure** reporting, gates on merge/release pipelines, parallel test execution.
 - **Observability & Debug:** Kibana, Elasticsearch, Grafana, Graylog, CloudWatch, New Relic — log-driven investigation during test failures and production-like staging issues.
 - **Full-Stack Context:** Node.js, Java (Spring Boot), TypeScript, React, PostgreSQL, Redis, Kafka, AWS, Docker, Kubernetes — helps design realistic tests and talk to dev teams in their language.
 - **QA Process:** Agile/Scrum release cycles, risk-based testing, regression prioritization, workflow improvements, task distribution across day-to-day QA activities.
-

Work Experience

InstruxMusic (Remote, USA) — Senior Full-Stack Developer, Tech Lead. Nov 2024
— *Present*

- Own quality for a multi-tenant B2B SaaS launch — manually validate scheduling, **Stripe billing**, invoicing, and notification flows before each release, then automate stable cases in **Python (pytest)**.

- Maintain **Postman collections** for REST APIs (auth, payments, webhooks); run Newman in CI on every deploy to DigitalOcean via GitHub Actions with **Allure** reports.
- Test complex business rules around multi-tenant scheduling, proration, and failed-payment retries — document scenarios with product stakeholders and fold edge cases into regression packs.
- Shipped production MVP in under 3 months while keeping a manual exploratory pass on video/WebRTC features alongside API automation.

[View Recommendations](#)

Congrify (Remote, Germany/Italy) — Full Stack Senior Software Engineer, Tech Lead. *Oct 2023 – Oct 2024*

- Shared QA ownership on a **B2B payment-intelligence platform** — ~50/50 manual validation of merchant analytics features and extending the team's **Python automation framework** for API and data-pipeline regression.
- Manually tested transaction anomaly alerts and payment reconciliation logic with analysts; automated recurring cases and reduced flaky suites by tightening async wait patterns and test data setup.
- API testing with **Postman** across Java, Python, and Node.js Lambdas; used **Kibana** and Grafana to trace failures through SQS/Kafka ingestion paths during staging runs.
- Ran **load tests** on peak transaction ingestion scenarios before OLAP migrations to ClickHouse/Snowflake; flagged bottlenecks back to dev teams pre-release.
- Integrated automated suites into **GitLab CI/CD** with Allure dashboards; collaborated with developers on release checklists and post-deploy smoke criteria.
- Improved QA workflow — clearer test plans per sprint, shared regression ownership, and faster triage when payment data mismatches appeared in staging.

FxPro (On-site, Limassol, Cyprus) — Senior Software Engineer. *Nov 2022 – Oct 2023*

- Tested and stabilized APIs across **60+ payment and trading microservices** — manual exploratory testing of complex cross-border payment configs plus **Python** regression for critical REST paths.
- Validated migration of payment settings for **20+ systems in 50+ countries** — scenario matrices for currencies, limits, and provider rules; close work with business analysts on expected behaviour.
- Built Postman environments mirroring staging clusters; documented API contracts used by QA and downstream teams across 40+ services.
- Supported **performance testing** on auth and payment flows (PostgreSQL, Redis under load); wired automated checks into GitLab pipelines — contributed to 25% faster, safer release cycles.

- Used New Relic, Graylog, and Grafana during test investigations — same observability stack devs used in production incident response.

[View Recommendations](#)

Cognitran (On-site, Krakow, Poland) — Senior Software Engineer. *Mar 2021 – Oct 2022*

- Tested offline-first diagnostic software for Ford and Jaguar — manual validation of complex enterprise workflows plus automated checks on data-import pipelines; strict quality gates before client deliveries.

Huawei (On-site, Moscow, Russia) — Senior Software Engineer. *Jan 2020 – Mar 2021*

- Established CI/CD quality practices across 50+ Java projects — smoke and regression hooks in pipelines, shared testing standards with distributed open-source teams.

Grid Dynamics — Intern to Senior Software Engineer. *Dec 2015 – Jan 2019*

- Progressed from Intern to Senior Engineer; API and integration testing on financial data microservices for **Raymond James**, plus internal tooling for Google and Home Depot — early foundation in structured QA on enterprise systems.
